

About Akktis

Akktis has the ambition to help startups in innovative projects and ideas, in business decisions and IT development. At Akktis we use different programming technologies, aiming to stay at the forefront of technology. Working at Akktis is a great opportunity to work on innovative and challenging projects, within a great team of competent developers.

We currently have around 8 employees in our main office in Sofia and branch office in Paris, serving startups as well as big companies mostly on the french-speaking markets.

Your task

Your task is to create a user collection, where a user is able to browse through existing users or create a new one.

Notice: Use plain PHP or Any PHP framework of your choice!

#Features

1. Backend:
 - a. Establish a table schema on MySQL with columns id, first name, last name and favorite colors (has to be one out of blue, green, red, yellow, black, white)
 - b. Create the ability to save to and search within this table
2. Frontend:
 - a. Develop a page that display the current users in a grid (with columns First name, Last name, and Favorite colors (user can choose several colors)), using bootstrap, and also has a form to add a new user through Ajax
 - b. Develop a search filter for those fields using JQuery/Ajax
 - c. When clicking on the column containing the color preference, it should display respective colors in a box or modal.

#Tips

- We like bitwise

#Requirements:

This are must have requirements, your application needs to fulfill:

- PHP >= 7.0
- MySQL >= 5.5
- Bootstrap >= 3.x
- jQuery
- HTML5
- GitHub
